MWC 2015 in Barcelona

EBlink announces its nomination to the Global Mobile Awards for its Wireless Fronthaul technology

the company is competing for
the “Best Mobile Infrastructure” award alongside
Alcatel-Lucent, Huawei, CCS and Nokia

Pioneer of wireless fronthaul technology, EBlink announces its nomination for a Global Mobile Award at the 2015 Mobile World Congress in Barcelona, taking place March 2-5. The company will present this technology and its applications, along with its latest *FrontLink*[™] product for mobile network deployment.

With over 20 million euros invested in Research & Development, EBlink has just been recognized by the industry for its technological advance in mobile infrastructures. Tested and approved by operators internationally, this new technology is playing a major role in the mobile telecom ecosystem.

In a market worth over 20 billion euros, EBlink's solution offers a best-in-class performance and makes it possible to install sites nearly anywhere (street furniture, remote antennas, etc.). It allows operators to optimize their network deployment, and respond immediately to user expectations.

Complementary to fiber, wireless fronthaul is suited to 4G networks as well as centralized architectures (LTE-A, C-RAN).

“Wireless fronthaul picks up where fiber leaves off, removing a key obstacle to C-RAN adoption in many markets”, explains Alain Rolland, EBlink's founder and CEO. “Our *FrontLink*[™] system represents a technological breakthrough, with unequalled performance: up to 7.5Gbps CPRI on a wireless link within a 70MHz bandwidth. This is 10 times more efficient than other industry solutions.”

A rising player in the mobile telecom industry, EBlink continues to build partnerships with leading industrials in order to foster technological synergies and accelerate the distribution of its solutions worldwide.

EBlink will be present at this year's Mobile World Congress in Barcelona (March 2-5) in Hall 5, booth 5B73.

Wireless Fronthaul Technology

Leading wireless fronthaul in mobile telecom networks

Press release – February 17, 2015

About Eblink

Founded in France in 2005, Eblink is revolutionizing the mobile network market with a new industry standard: wireless fronthaul. Based on its founding vision of evolving mobile network architecture, the company's technology gives operators an immediate solution to the growing demands of mobile multimedia applications.

Eblink's leaders have 20 years of experience in the deployment, operation and optimization of mobile networks.
